## Projects

---

 **Data Analysis Application for Yelp.com** • Java • SQL • JSON • Faceted Search • Full stack

- Developed a data analysis application to run queries using SQL on YELP.com database to extract useful information for local business and individual users.
- This application has a user interface that provides the user available business categories, attributes associated with each business category along with business review and YELP user information. Using this application the user is able to search for the business from various business categories that have the properties that the user is looking for.

 **Face Recognition Application** • JavaScript • HTML • CSS • React • Machine Learning • Full stack

- Developed a face recognition application using Clarifai machine learning API to detect face in a picture.
- This application provides a user interface to allow users to sign in, upload picture URLs and detect face from the uploaded picture.
